

PROCESS SAFETY
CERTIFICATION

PrimaCert
Certifications in Process Safety

Primacert offers process safety certifications to individuals who have met a defined standard of competency. We've created standards of competency in key technical areas of process safety. Certifications require proficiency to be demonstrated through a combination of relevant academic qualifications; amount of experience; appropriate training; references for qualifications, experience, and ethics; successful completion of an examination; and, in some cases, review of work products.

Primacert's certifications benefit professionals. Becoming certified in process safety is an increasingly important and recognized measure of competence. Whether you plan to apply for a promotion or position with a new employer, or simply want to enhance your credentials, being a Primacert certified professional adds to your value as an employee. Certified individuals demonstrate competency and the commitment to professional development that most companies seek.

Primacert's certifications benefit companies. Companies depend on competent people to perform effective process safety and risk management studies. Certified personnel also are more likely to produce high-quality work products. In today's world of high turn-over rates, ensuring that safety-critical work is performed competently challenges even the best managed companies. Incorporating certification into safety management systems is increasingly becoming standard industry practice.
